

Active and Intelligent Soft Matter

Soft matter is everywhere - from cosmetics and food to muscles and brains. The activity and intelligence of living matter is inspiring new synthetic materials that blur the boundaries between materials, machines, and computers—aiming toward a future where such materials can learn and solve problems on their own. In this session, three of the leaders in this field give an overview of these exciting developments.

Speakers: Daniel Bonn (UvA), Daniela Kraft (UL), Nachi Stern (Amolf)

Chair Martin van Hecke (UL, Amolf)
