

# FYSICA 2025 – Leiden 11 April 2025

## **The birth of the Einstein Fountain**

The Einstein Fountain, just outside the venue of FYSICA 2025, uses water cones to depict how light moves in a rotating black hole.

Join the creators of the fountain, artist and professor of theoretical astrophysics Vincent Icke and his wife Charlotte, in this session to hear about the background of their project, and have a look with them at this extraordinary fountain itself.
